

# How to connect the network cabinet to the same network cable

## Article Overview

Connecting network cables to a network cabinet requires careful planning, structured routing, labeling, and proper cable management to ensure maintainability, safety, and scalability.

### Step 1: Plan Your Network Cabinet Layout

Before connecting any cables, determine which devices will be installed, such as switches, patch panels, servers, and UPS units. Measure the size and depth of each device to ensure proper spacing and airflow. Decide on the rack units (U) required for each device and leave at least 20% of space for future expansion. Consider redundancy, failover requirements, and the separation of internal and external network connections ( ).

### Step 2: Prepare the Cabinet

- Choose a suitable cabinet size and type (19-inch or 23-inch, floor-standing or wall-mounted) based on your equipment ( ).
- Ensure proper ventilation and cooling by leaving space between devices and keeping air vents unobstructed ( ).
- Install cable management accessories such as cable racks, wire bridges, or winding reels to guide cables and maintain neatness ( ).

### Step 3: Route and Connect Cables
