

How to create a cable tray opening in Revit

Article Overview

Cable trays in Revit can be created using the Systems tab in the Electrical section, allowing horizontal and vertical placement with customizable fittings and elevations.

Step 1: Access the Cable Tray Tool

Open your Revit project and navigate to the Systems tab, then select Electrical and click on Cable Tray. You can choose between Cable Tray with Fittings or without Fittings depending on your project needs .

Step 2: Set Type and Parameters

Before placing the tray, configure its properties:

- Width and Height: Define the tray dimensions.
- Offset: Set the vertical distance from a reference level.
- Bend Radius: Adjust for smooth turns.
- Fittings: Load and select vertical inside/outside bends, T-junctions, reducers, and unions as needed . Use Edit Type to modify these parameters and apply them to your cable tray type.

Step 3: Place Horizontal and Vertical Runs

- Horizontal Runs: Click to start the tray, drag along the desired path, and click to place points. Avoid conflicts with lights, transformers, or other MEP elements .
