

How to find the model number of a power distribution box

Article Overview

Check the label inside the distribution box door, inspect manufacturer markings, and note the type and configuration of breakers to identify the model.

Step 1: Look for the Manufacturer Label

Most distribution boxes have a label or nameplate inside the door or on the enclosure. This label typically includes:

- Manufacturer name
- Model number
- Rated voltage and current
- Compatible breaker types
- Standards compliance (e.g., IEC, UL, BS) Reading this label is the most direct way to identify the model of your distribution box .

Step 2: Inspect the Breakers and Internal Components

If the label is missing or unreadable:

- Examine the breakers: Different brands like Siemens, Square D, or Federal Pacific have distinct designs that can help identify the box .
- Check the internal layout: Note the number of ways, busbar arrangement, neutral and earth bar configuration, and DIN rail space .
