

How to install a fiber optic router storage box

Article Overview

Installing a fiber optic router storage box involves selecting the right location, securely mounting the box, connecting fiber cables, and testing the network for proper operation.

Step 1: Preparation

Before installation, ensure you have all necessary tools and equipment: a fiber optic router storage box, drill, screws, anchors, level, stud finder, fiber optic cutting pliers, and a fiber optic tester (). Confirm that your fiber optic network service is active and that the optical network terminal (ONT) is ready for connection ().

Step 2: Choose the Installation Location

Select a secure, accessible location for the storage box, typically on a wall or cable rack. Ensure the box is at least 20 cm away from the cable exit to allow sufficient space for storing and managing fiber cables (). Consider environmental factors such as temperature, humidity, and potential interference ().

Step 3: Mount the Storage Box

- Use a stud finder to locate wall studs for secure mounting ().
- Mark the mounting points and drill holes.
- Insert anchors if mounting on drywall to support the weight of the box.
