

How to remove cable trays from the internet

Article Overview

Removing internet cables or cable trays requires distinguishing between internal wiring you can handle and external utility lines that must be managed by professionals.

Internal Cable Trays and Wiring

For cables inside your home or office, such as those running along walls or ceilings:

- **Power Off and Safety Checks:** Ensure all related devices are powered off. Even low-voltage communication cables can carry induced voltage, so verify with a voltage tester if necessary .
- **Disconnect from Devices:** Remove cables from modems, routers, or network switches carefully. For fiber optic cables, handle connectors gently to avoid damaging the glass fibers and follow manufacturer instructions .
- **Remove Cable Trays:** If the cables are mounted on trays, first check the project layout to identify the exact trays to remove. Use appropriate tools such as wrenches, hydraulic shears, or angle grinders depending on the tray material . Support cables temporarily to prevent strain or damage.
- **Cap or Cover Connectors:** For fiber optic cables, place end caps on exposed connectors to prevent contamination or signal loss .

External Utility Lines
