

How to set up a fiber optic network connection and a wireless router

Article Overview

To connect fiber optic internet to a wireless router, you need an Optical Network Terminal (ONT) to convert the fiber signal, then link it to your router via Ethernet.

Required Equipment

- Optical Network Terminal (ONT): Provided by your ISP, it converts the incoming fiber optic light signal into an electrical signal your router can use .
- Fiber optic cable: Typically single-mode with SC/APC or SC/UPC connectors, connecting the wall outlet to the ONT .
- Ethernet cable: Cat6 or higher recommended to connect the ONT to the router's WAN port .
- Fiber-ready router: Ensure it supports gigabit speeds or higher to fully utilize fiber performance .

Step-by-Step Setup

- Locate the fiber wall outlet: This is where your ISP's fiber line enters your home .
- Connect the fiber optic cable to the ONT: Remove protective caps, align the connector, and insert until it clicks securely . Handle the fiber carefully to avoid damage.
- Power on the ONT: Wait 2-5 minutes for the status lights to stabilize, indicating a successful connection .
