

How to upgrade your home router to a fiber optic router

Article Overview

To upgrade your home router for fiber optic internet, ensure your router has a Gigabit Ethernet WAN port, connect it to the ISP-provided ONT, and consider a Wi-Fi 6/6E router for optimal speeds.

Step 1: Check Router Compatibility

Fiber internet requires an Optical Network Terminal (ONT), which converts light signals from the fiber line into Ethernet data. Your router must have a Gigabit Ethernet WAN port to connect to the ONT. Routers designed for DSL or cable (with phone line or coaxial inputs) are not compatible. For best performance, especially on plans exceeding 1 Gbps, a Wi-Fi 6 or 6E router is recommended to fully utilize fiber speeds and manage multiple devices efficiently .

Step 2: Gather Required Equipment

- Optical Network Terminal (ONT): Provided and installed by your ISP.
- Fiber optic cable: Connects the wall outlet to the ONT.
- Ethernet cable: Connects the ONT to your router's WAN port.
- Fiber-ready router: Ensure it supports gigabit speeds or higher .

Step 3: Connect the Hardware

- Locate the fiber wall outlet where the ISP fiber line enters your home.
