

How to use the telecom-specific fiber optic cable hanging pulley

Article Overview

To use a fiber optic cable hanging pulley, set up guide pulleys along the span, connect a traction rope to the cable, and gradually release the cable using manual or mechanical traction while maintaining proper tension and bend radius.

Step-by-Step Guide

1. Prepare the Cable and Pulley System

- Place the fiber optic cable on a cable tray or disk at the starting pole.
- Fix a large pulley at the lead-on and lead-off poles to guide the cable.
- Install small guide pulleys every 10-20 meters along the suspension line to direct the cable and reduce friction . 2. Set Up the Traction Rope
- Thread a traction rope through each guide pulley along the span.
- Create a traction head and securely connect the rope to the fiber optic cable, ensuring the pulling force is applied to the cable's reinforcing members, not the fiber itself . 3. Manual Traction Method

- Gradually push or tighten the cable tray to release the cable.
- Assign personnel at every other pole to assist with auxiliary traction, especially at corners where guide pulleys may be installed.
- Maintain communication between the cable laying end, receiving end, and traction head to ensure smooth operation . 4. Mechanical Traction Method
