

How to wire a construction site electrical distribution box and its price

Article Overview

The cost of installing a construction site electrical distribution box typically ranges from \$1,500 to \$5,000 or more, depending on box type, amperage, labor, and site complexity.

Distribution Box Costs

The price of a distribution box varies widely based on specifications such as voltage rating, amperage capacity, number of circuits, material, and safety features. Standard residential or light commercial boxes may cost a few hundred dollars, while heavy-duty industrial or outdoor-rated boxes can reach several thousand dollars due to enhanced durability, weatherproofing, and advanced monitoring features. Steel enclosures are more expensive but durable, whereas plastic boxes are cheaper and suitable for indoor use.

Installation and Wiring Costs

Labor costs for wiring and installing a distribution box depend on project complexity, location, and electrician rates. For commercial or industrial projects, electricians may charge \$75-\$100+ per hour, with total installation costs ranging from \$1,000 to \$3,500 for a mid-size service panel, including conduit, breakers, and wiring. Outdoor or high-capacity installations may require additional labor for mounting, grounding, and compliance with local codes, increasing costs further.

Factors Affecting Total Price

- **Amperage and Voltage:** Higher-capacity boxes and three-phase systems cost more.
