

How to wire a small power distribution box for surveillance cameras

Article Overview

To wire a small power distribution box for surveillance cameras, connect each camera's positive and negative leads to the corresponding terminals on a 12V or 24V DC power supply box, ensuring correct polarity and sufficient amperage for all cameras.

Step 1: Choose the Right Power Supply Box

Select a power distribution box that matches your cameras' voltage and total amperage requirements. Most small systems use 12V DC boxes, which are suitable for standard analog or IP cameras. Ensure the box can supply enough current for all cameras combined; for example, five cameras drawing 0.5A each require at least 2.5A total output .

Step 2: Gather Tools and Materials

You will need:

- Screwdrivers for terminal connections
- Wire cutters and strippers
- Electrical tape or connectors
- Voltage tester
- Drill and mounting hardware for the box
- Siamese coaxial cables or power pigtails for each camera
