

How to wire the AP power cabinet

Overview

Connect the building wire LAN 1 wire (either PoE (Power over Ethernet) + at or PoE af) to the black RJ-45 connector using short patch cables. Alternatively, connect using the associated punch-down block. Personnel mounting the AP must have knowledge of the wireless AP, bridging techniques, and grounding methods. The IW9165D Access Point can be wall or pole mounted. It provides a detailed overview of the physical and performance characteristics of each access point model and explains how to install the access point. HPE Aruba Networking 650 Series Campus Access Points are high-performance, multi-radio wireless devices that can be deployed in either controller-based or controllerless. Note Certain Cisco AP models are powered using a Power over Ethernet (PoE) power source and do not require a separate power cable. The two most common mounting brackets are: The low-profile bracket (AIR-AP-BRACKET-1), provides a tight fit between the access point and the ceiling but does not. With the AP-PSBIAS-2P3-ATR power injector solution, centralized power can be provided for devices without a local power supply for each. The AP-PSBIAS-2P3-ATR power injector is a single-port, 802.
