

Huawei Fiber Optic Switch SNMP

Overview

This document provides the configurations of network management and monitoring features supported by the product, including SNMP, RMON and RMON2, LLDP, Performance Management, iPCA, NQA, Service Diagnosis, Mirroring, Packet Capture, NetStream, sFlow, TWAMP Light, and. This document provides the configurations of network management and monitoring features supported by the product, including SNMP, RMON and RMON2, LLDP, Performance Management, iPCA, NQA, Service Diagnosis, Mirroring, Packet Capture, NetStream, sFlow, TWAMP Light, and. SNMP manages network elements by using a central computer (a network management station) running network management software. SNMP has the following advantages: A network administrator can use SNMP to quickly query information, modify data, locate faults, and so forth on any SNMP agent. This document provides. SNMP is a standard network management protocol that is widely used on TCP/IP networks. SNMP offers simplicity and power. Three SNMP versions are available — SNMPv1. In contrast to SNMPv1 and SNMPv2c, SNMPv3 allows additional security. In this example only the required parts of the SNMPv3 configuration are described. However it is advisable to configure additional features - like an ACL. Shahed Israr is a Network Engineer specializing in GPON, FTTH, and telecom access network technologies.

Article Content

S1720, S2700, S5700, and S6720 V200R011C10 MIB Reference

The SNMP agent has been configured on the switch. For the configuration procedure, see SNMP Configuration in the S1720, S2700,
