

# Huawei Fiber Optic Wireless Router Setup

## Article Overview

Setting up a Huawei fiber optic router involves connecting the fiber to the ONT, linking the ONT to the router, and configuring your network via the web-based management page.

### Step 1: Connect the Fiber Optic Cable

Locate the fiber optic wall outlet provided by your ISP. Connect the fiber optic cable to the Optical Network Terminal (ONT), which converts the fiber signal into Ethernet. Power on the ONT and wait for the status lights to stabilize, usually 2-5 minutes .

### Step 2: Connect the Router

Use an Ethernet cable to connect the ONT's LAN port to the WAN port on your Huawei router. If your router has self-adaptive ports, any port may work. Then, plug in the router to a power source and wait for the indicator lights to confirm it is powered on .

### Step 3: Access the Router Management Page

Open a web browser on a connected computer or device and enter the router's default IP address (usually printed on the label, e.g., 192.168.100.1). Log in using the default credentials (commonly admin/admin) and follow the setup wizard .

### Step 4: Configure Internet Settings

The router will attempt to detect your Internet access mode automatically. If it cannot, select DHCP manually. Enter your broadband account and password provided by your ISP. For advanced users, you can also configure IP address, subnet mask, gateway, DNS servers, and VLAN settings if required by your ISP .

### Step 5: Set Up Wi-Fi
