

Huijue Optical Port Module

Article Overview

Huijue optical port modules are used by inserting them into the switch's SFP/SFP+ ports and monitoring their status via switch commands or management interfaces.

Installation

- Identify the correct port on your Huijue switch for the optical module. Ensure the port type (SFP, SFP+, or QSFP) matches the module specifications .
- Insert the module gently into the port until it clicks into place. Avoid touching the fiber connector to prevent contamination.
- Connect the fiber optic cable to the module, ensuring the transmit (Tx) and receive (Rx) ends are correctly aligned with the corresponding ports on the other device .

Configuration and Monitoring

- Use the switch's command-line interface (CLI) to view module information. Common commands include:
- `display transceiver` – shows all optical modules on the switch.
- `display transceiver interface interface-type interface-number` – shows details for a specific port .
- Adding the `verbose` parameter provides real-time diagnostics such as temperature, voltage, bias current, and transmit/receive optical power .
- Check that the wavelength and transmission distance of the module match the network requirements to ensure proper connectivity .

Diagnostics and Troubleshooting
