

Indoor Invisible Communication Fiber Optic Cable

Overview

Indoor invisible Cable is designed for indoor solutions for multi-dwelling unit (MDU) and living unit (LU) applications to enable fast and easy fiber installation along predetermined paths by adhering to it in place. This article provides an essential guide to understanding indoor invisible cables. Ultra-slim transparent fiber optic cable coated with nylon 12 (PA12) or TPU material for near-invisible indoor routing. This solution provides a complete in-building solution that can help accelerate the adoption of fiber optic service through. FTTR, or Fiber to the Room, is a networking technology that extends fiber optic connectivity directly into every room of a home or office. Bynet Invisible optical cable is made by coating a layer of transparent materials which is PA12 or TPU with high hardness and high bending resistance features.
