

Installation and Fixing of Cable Tray Cover Plates

Article Overview

Cable tray cover plates can be securely fixed using pressing plates, screws, buckles, padlocks, or seven-shaped clips depending on installation type and environment.

Common Fixing Methods

- Pressing Plate Fixing Punch holes in the cover plate, place a pressing plate over it, and secure with screws. This method works for both horizontal and vertical installations and provides a stable hold .
- Screw Fastening Punch holes in the cover plate and use rotating screw plates to attach the cover to the tray. Suitable for horizontal or vertical setups, this method ensures a strong, permanent connection .
- Buckle Fixing Bend folds at both ends of the buckle to secure the cover without punching holes. Best for horizontal installations, as vertical setups may allow the cover to slip .
- Padlock Fixing Weld a padlock hook to the cover and a padlock body to the tray, then lock them together. This method is extremely strong, ideal for outdoor or windy environments, and works for both horizontal and vertical installations .
- Seven-Shaped Clip or Buckle Punch holes in the tray, insert the lower end of the seven-shaped clip, and tighten the upper end on the cover with screws. Provides a secure hold and is reusable, often made from 304 stainless steel for corrosion resistance .
