

Installation cost of fiber optic cable trays in the computer room

Article Overview

Installing fiber optic cable trays in a computer room typically costs between \$1,500 and \$30,000 depending on project size, cable type, and labor complexity.

Material Costs

Fiber optic cable materials generally range from \$1 to \$6 per linear foot, depending on fiber type (single-mode or multimode), strand count, and jacket construction. For indoor computer room installations, plenum-rated or riser-rated cables are commonly used, with plenum-rated cables costing slightly more due to fire safety requirements. Fiber optic cable trays themselves vary in price based on material (metal or PVC), size, and load capacity, typically adding \$5 to \$15 per linear foot for standard commercial trays.

Labor and Installation Costs

Labor is a significant component of the total cost. Installing fiber in a computer room involves mounting trays, routing cables, terminating fibers, and testing connectivity. Labor rates vary by region but generally range from \$50 to \$150 per hour, with total labor costs influenced by the complexity of the room layout, number of cable drops, and accessibility. For a medium-sized computer room with 100–200 network drops, total installation costs—including trays, cables, and labor—can range from \$15,000 to \$30,000.
