

Installation of Touch Screen Distribution Box

Huijue engineering specific Fiber optic

HJ GROUP offers a wide variety of product types for you to choose from.

Article Overview

Installing a touch screen in a distribution box requires careful mechanical mounting, proper electrical connections, grounding, and protection against environmental factors.

Mechanical Mounting

- **Cutout Preparation:** Measure the touch screen module and cut an aperture in the distribution box or wall slightly larger than the back box dimensions to allow for adjustment (e.g., 3mm larger than the nominal size) .
- **Mounting Options:** Depending on the enclosure, the touch screen can be mounted using:
 - Flush mounting with screws or slots for wall adjustment .
 - Direct bonding to a transparent front panel using adhesive or optical bonding for high-end installations .
 - Retaining plates and potting compounds to stabilize the display and compensate for vibrations or temperature fluctuations .
- **IP Protection:** Ensure the enclosure provides adequate protection. Simple mounting with gaskets may achieve IPX4, while fully bonded displays with sealed front panels can reach IP65 .
