A temporary power distribution box (TPDB), often called a spider box, functions as a portable electrical hub that centralizes and protects power distribution on a job site. This unit provides operators the ability to safely t p into and distribute the required voltage from a variety of sources. Do not attempt installation or operation until you are familiar with al safety instructions in this manual. Below procedure will help you to establish a safe standard for the installation of temporary and permanent electrical fixtures/appliances on project sites.

Overhead Cables: Overhead supply from the supply point or metering point to the distribution boards on the site should be of a robust pattern. Whether you are an electrical contractor or a construction brigade, knowing how to properly and safely install distribution boxes is the basis of ensuring the safe operation of the entire system. However, exposure to weather, frequent relocation, rough use and other condi-tions not normally encountered with conventional wiring systems necessitate special consideration not require in other applications or in completed structures.
