

# Intelligent Module Lighting Switch in Distribution Box

## Article Overview

An intelligent module lighting switch is a smart distribution device that allows flexible, programmable control of multiple lighting circuits within a distribution box, integrating sensors, switches, and dimming protocols for efficient energy management.

### Overview

Intelligent module lighting switches are designed to manage and control multiple lighting circuits from a central distribution box. They combine mechanically-latched relays, programmable outputs, and digital communication protocols to provide independent switching, dimming, and monitoring of connected luminaires. These modules are often compatible with DALI, MLS Bus, LON, or BACnet, allowing seamless integration into smart building systems and enabling energy-efficient lighting control .

### Key Features

- **Multiple Circuit Control:** Modules like Delmatic's Twelve-Twelve can handle up to twelve 20A outputs, each independently switchable, allowing centralized management of lighting and power circuits .
- **Integration with Sensors and Switches:** Intelligent modules accept inputs from presence detectors, intelligent switches, and emergency monitoring devices, enabling automated or occupancy-based control .
