

# Is geological surveying for telecommunications towers necessary

## Overview

Before the placement of any telecommunications or cellular tower, a licensed surveyor must conduct an official land survey. In this article, we'll break down what these tools are, why they matter, and how they are helping telecom projects in Nigeria succeed, using real-life examples and simple language. Ideally, this will include mapping the property and gathering data on local weather patterns, geology, hydrology, and topography. The geotechnical engineer is now expected not only to perform. The technical specifications covers detailed survey including routealignment, profiling, tower spotting, optimization of locations, check survey,contouring, and soil investigation for the transmission lines Detailed Survey using GPS, Total Work stations, long range scanners &Digital theodolites of.
