

Is investing in fiber optic cables worthwhile

Overview

Installing fiber optic cabling is an investment in long-term performance. While the upfront cost may be higher than copper, the payoff comes in lower maintenance, fewer outages, and the ability to handle tomorrow's technology without another overhaul. The aftermath of the Covid-19 pandemic has highlighted the gap in high-speed home internet, leading to increased investment in fiber optic network deployment as the limits of copper infrastructure have become apparent. Fiber networks were once regarded as a high-risk asset class. Fiber investments are complex, and we think it. Explore the financial dynamics of fiber optic investments, including costs, revenue models, and the impact of government programs on ROI. But before making the jump, it's important to understand what makes fiber different and when it truly makes sense for your setup.
