

Large office buildings should select core switches

Overview

Select Cisco campus switches by network role first, then by model. Access switch selection depends on endpoint count, PoE demand, mGig readiness, closet growth, and uplink options. We will cover each layer's role, switching and routing requirements, port speeds, PoE, redundancy, oversubscription, deployment size, collapsed-core. Knowing the roles of core, aggregation, and access switches in contemporary network topology becomes essential to create effective and scalable networks. So, how to choose the right core switch?

All need to pay. Design enterprise networks for commercial buildings — core/distribution/access switching hierarchy, VLAN segmentation, routing protocols, redundancy, and wireless integration.
