Article Overview

Lebanon is actively expanding its fiber optic network through a nationwide FTTX project, covering urban and remote areas with modern optical infrastructure.

Overview of FTTX Deployment

Lebanon's Ministry of Telecommunications (MoT) and OGERO launched the Fiber-to-the-x (FTTX) project in June 2018 to upgrade the country's broadband infrastructure . FTTX encompasses several configurations, including Fiber-to-the-Home (FTTH) and Fiber-to-the-Cabinet (FTTC), aiming to replace legacy copper networks with high-capacity optical fiber. The project targets internet speeds of at least 50 Mb/s and is executed in three phases, covering both urban and remote locations .

Scope and Coverage

The FTTX network spans Beirut, Mount Lebanon, Bekaa, and the South, with a total of 9,000 km of fiber optic cables being installed across 147 cities . The construction process includes surveying, civil works, cabling, splicing, terminating, and testing, ensuring a fully functional passive optical network .

Key Companies and Contractors

Several Lebanese companies are actively involved in optical cable construction and network integration:

- Fiber Works & Communications (FWC) S.A.R.L. specializes in high-speed and wide-area networks, providing European and American fiber products, and supporting Lebanon's FTTX infrastructure .
