

Lightning protection distribution cabinet wiring terminals

Overview

The UL Standard 96 addresses the minimum requirements for construction of air terminals, cable conductors, fittings, connectors, and fasteners used in quality lightning protection systems. Lightning and surge protection may only be installed, put into operation and maintained by qualified electricians who are familiar with national and international laws, regulations and standards. This. ected to shield it from lightning. It is located at an elevation such that a line passing through the static wire and the outermost conductor below it is at a 30° aximum angle with a vertical line. This continuous overhead rounding electrode at each gh use of an overhead static wire.

LIGHTNING PROTECTION AND GROUNDING

If additional grounding is needed and this is a terminal pole, a #2 bare copper counterpoise wire 100"-150" long may be placed in the conduit trench and connected to the ground lead.

TECHNICAL HANDBOOK

The lower lightning protection levels (LPL II, III & IV) each increase the air-terminal spacing, reducing their ability to capture smaller lightning flashes, thus reducing overall the percentage of lightning
