

Modify DNS on the core switch

Article Overview

To modify DNS on a core switch, configure the ip name-server entries and ensure ip domain-lookup is enabled, then verify resolution and client access.

Steps to Modify DNS

- Access the Switch
- Connect via console or SSH.
- Enter privileged EXEC mode:

enable

- Enter global configuration mode:

configure terminal

- Enable Hostname Resolution
- Ensure the switch can resolve hostnames:

ip domain-lookup

- Configure DNS Servers
- Add one or multiple DNS servers using the ip name-server command:

ip name-server 8.8.8.8 8.8.4.4 You can list multiple servers in a single command or use separate commands; both methods work and the switch will prioritize them in order .

- Optional: Configure Domain Name
- If you want the switch to resolve short hostnames without fully qualified domain names:
