

No internet connection when the fiber optic router is plugged in via Ethernet cable

Overview

Quick Answer: 1) Unplug ethernet cable from both ends, wait 10 seconds, replug. If still broken, try a different cable and port. A wired Ethernet connection lets you get a fast internet connection—plug one end of the Ethernet cable into your router at home, then plug the other end into the Ethernet port on your Windows PC. If your PC doesn't have an Ethernet port but you want to try this option, you might consider getting a . I've tried flushing the DNS, using default IP settings for the connection, restarting the router, modem, and PC, using the network reset button, using the network adapter troubleshooter, updating my drivers, switching ethernet cables, using a different ethernet port on the router, and connecting. Ethernet is a wired network technology that transmits data over twisted-pair cables. These cables use electrical signals to send and receive data, providing a robust and fast connection. x, run ipconfig /release then ipconfig /renew.
