

Om3 pigtail fiber

Article Overview

An OM3 ST fiber optic pigtail is a short multimode fiber with a pre-terminated ST connector on one end and exposed fiber on the other, designed for high-speed data transmission in telecom, data centers, and industrial networks.

Overview

OM3 pigtails are multimode fibers with a 50/125 μm core/cladding diameter, optimized for high-bandwidth applications such as 10 Gigabit Ethernet over short distances. The ST connector features a bayonet-style coupling with a 2.5 mm ferrule, providing reliable and durable connections for field installations. The exposed fiber end allows for fusion or mechanical splicing to trunk cables or patch panels, ensuring seamless integration into existing networks .

Key Features

- **High Performance:** OM3 fibers support high-speed data transmission with low insertion loss and minimal signal degradation .
- **Durable Construction:** Pigtails often include tight-buffered 0.9 mm jackets and flame-retardant coatings for safety and resilience in industrial environments .
- **Connector Options:** Available in ST, SC, LC, and FC connectors, with ST being ideal for field installations due to its bayonet design .
- **Color Coding:** Pigtails are typically color-coded (e.g., aqua for OM3) to simplify identification and organization in high-density setups .
- **Ease of Installation:** Designed for high-density splicing panels, pigtails allow quick and reliable fusion or mechanical splicing .
