

Outdated Network Security Equipment

Overview

Outdated security devices pose a growing risk for organizations, exposing them to cyber threats. Organizations have historically depended on firewalls, routers, VPN servers, and email gateways to safeguard their networks from potential breaches. For IT and infrastructure teams, proactive planning and lifecycle tracking are critical to ensuring that your network can keep up with. Outdated or underperforming network equipment can lead to performance bottlenecks, security vulnerabilities, compliance risks, and out-of-control maintenance costs. But for small businesses here, the same charm that draws tourists also challenges technology infrastructure.
