

Outdoor distribution box circuit breaker power

Article Overview

An outdoor distribution box with circuit breakers safely splits incoming power into multiple circuits while providing weatherproof protection and overcurrent safety for exterior installations.

Overview

An outdoor electrical distribution box (also called a panelboard or load center) is designed to house one or more circuit breakers and distribute power to multiple branch circuits in outdoor environments such as patios, sheds, parking lots, or building exteriors . These boxes combine environmental protection with overcurrent protection, ensuring both safety and reliability.

Key Features

- **Weatherproof Enclosure:** Typically made from steel, aluminum, stainless steel, or fiberglass-reinforced polyester, rated per NEMA 3R, 4, or 4X or IP65-IP67, protecting against rain, dust, UV exposure, and temperature extremes .
- **Circuit Breakers:** Thermal-magnetic or electronic breakers compliant with UL 489 or IEC 60947-2, providing instantaneous trip for short circuits and time-delayed trip for overloads .
- **Integration:** Breakers are mounted on DIN rails or panel-mounted, with busbars, neutral bars, and grounding bars arranged per NEC 110.26 working clearance requirements .
