

Price of Suspension Wire Optical Cable

Article Overview

Suspension wire optical cables typically range from \$1 to \$10 per meter depending on type, strand count, and environmental specifications.

Overview

Suspension wire optical cables, also known as aerial suspension fiber optic cables, are designed to be supported by high-tension wires for long-distance telecommunications or power line applications. They combine fiber optic cores for data transmission with steel or aramid reinforcement for structural support, making them durable, weather-resistant, and suitable for aerial installations.

Factors Affecting Price

- **Cable Type and Strand Count:** Single-mode or multimode fibers, and the number of strands (2-48 or more), significantly influence cost. Higher strand counts increase both material and manufacturing costs.
- **Material and Coating:** Galvanized steel messenger wires, polyethylene jackets, and corrosion-resistant coatings add to durability but also raise the price.
- **Environmental Specifications:** Cables rated for extreme temperatures (-40°C to 85°C), UV exposure, or high wind loads are more expensive due to specialized materials and testing.
- **Installation Method:** Aerial suspension cables reduce trenching costs but may require additional hardware like mechanical suspensions or strain reliefs, which can affect overall project cost.
