

# Price of renovation work in optical fiber cable wells

## Article Overview

Renovation work in optical fiber cable wells typically ranges from €10 to €85 per metre, depending on installation method, access, and complexity.

### Cost Overview

The cost of renovating or maintaining fiber optic cable wells depends on several factors, including trenching depth, access difficulty, and required materials. In 2026, civil works for fiber optic networks range from €10 per metre for overhead deployment to €85 per metre for conventional trenching, with shallow-depth installation around €45 per metre being the most cost-effective option in Europe (DACH region). Civil works often represent up to 75% of total FTTH project costs, making them the largest expenditure in network renovation or expansion.

### Key Cost Components

- **Excavation and Trenching:** Costs vary with soil type, depth, and whether existing conduits can be reused. Urban areas with traffic control requirements increase expenses.
- **Cable Splicing and Testing:** Labor for fault locating, fusion splicing, and testing is a major driver. Per-splice costs typically range from \$200 to \$600, depending on complexity and equipment used.
- **Materials and Equipment:** Includes fiber patches, splice closures, connectors, and testing gear. High-performance fiber or specialized enclosures can increase costs.
