

Price of temporary electrical distribution boxes at construction sites

Article Overview

Temporary electrical distribution boxes for construction sites typically range from \$150 to \$1,500 or more, depending on power capacity, phase type, and safety features.

Price Range and Factors

The cost of a temporary site box varies widely based on several factors:

- **Power Capacity and Phase:** Single-phase 16A boxes suitable for standard tools and lighting are generally at the lower end of the price range, around \$150-\$300, while three-phase 32A or higher boxes for heavy machinery can cost \$500-\$1,500 or more .
- **Number and Type of Sockets:** Boxes with standard 2P+T sockets are cheaper, whereas units with industrial P17 sockets or multiple circuits increase the price .
- **Safety Features:** Integrated 30mA differential switches, emergency stops, IP-rated enclosures (IP44, IP54, IP65), and mechanical impact resistance (IK09) add to the cost .
- **Material and Durability:** Heavy-duty steel enclosures are more expensive than ABS plastic or composite alternatives, which are lighter and corrosion-resistant .
- **Smart Features:** Some modern boxes include energy monitoring, ground fault protection, and remote connectivity, which can further increase the price .
