

Project Quotation OTN Router OSFP

Overview

It emphasizes the use of both IPv4 and IPv6 addressing schemes and the selection of Open Shortest Path First (OSPF) as a routing protocol for efficiency and security. The project is budgeted between \$105,000 and \$160,000 with a timeline of approximately 63 days for completion. The document outlines a network design assignment that specifies requirements, project scope, configuration for routers and switches, and budgeting for implementations across various branches. It is considered as an initial phase before the commencement of a project. Use project quotations to make an attractive offer to a customer as the first step of the project phase. OSPF was designed expressly for IP networks and it supports IP subnetting and tagging of externally. The Cisco 8501-SYS-MT is a 51. 2T 8000 series fixed data center switching platform that incorporates the Silicon One G200 network processor into the Meta Minipack3 specification while running open Source Network Operating Systems. The 8501-SYS-MT has 64x800G OSFP ports in a 4RU formfactor that hosts. This Request for Proposal (RFP) document has been prepared solely for the purpose of enabling IDBI Capital to select a vendor for Supply, Installation, Commissioning and Maintaining of Manageable Switches.
