

Provide surge protection distribution boxes

Article Overview

Install a Type 2 SPD in your distribution box with proper overcurrent protection and short, direct wiring to safeguard your electrical system from surges.

Choosing the Right SPD

- Type 1 SPD: Installed at the service entrance to protect against direct lightning strikes.
- Type 2 SPD: Installed at the distribution board or consumer unit; standard for most homes and offices ().
- Type 3 SPD: Installed near sensitive devices like computers or servers for additional protection (). For a typical distribution box, a Type 2 SPD is recommended to handle switching surges and indirect lightning effects ().

Placement and Wiring

- Install the SPD after the main breaker in the distribution board ().
- Keep wiring short and direct, ideally less than 0.5 meters and never exceeding 1 meter in total length ().
- Use DIN rail or wall-mounted locations inside the distribution box for secure installation ().
- Ensure the SPD is connected to a reliable earth/ground to safely divert surge currents ().

Overcurrent Protection
