

Pw relay protection tester

Overview

Universal testing system PW636i (6x32A, 4x300V) can test all types of protective relays, including modern IEC61850 based relays. Other test works, such as transducer, energy meter, indication meter, etc. PW336i protective relay tester is the best economic model with 6 current channels and 4 voltage channels, capable of automatic testing differential relay easily without changing cable connection. PW636i-F (6x32A, 4x300V, 8 fiber optic ports) is the new generation of PW series relay test set which can be used both. Power System protection is crucial part of power station and substations safety which use protection relays and circuit breakers to isolate faulty parts or zones within the plant including Generator zone, Motor zone, Feeder zone, Bus zone, Transformer zone and Transmission Lines zone.
