

Reconnect the fiber optic router

From standard 1U to 8U sizes to
fully customized Non-standard enclosures.

Article Overview

To reconnect a fiber optic router, ensure the fiber cable is properly connected to the ONT, link the ONT to your router via Ethernet, and restart or reset the devices if needed.

Step 1: Check the Fiber Connection

- Locate the Optical Network Terminal (ONT) provided by your ISP. This device converts the fiber optic signal into an Ethernet signal your router can use .
- Ensure the fiber optic cable from your ISP is securely inserted into the ONT's optical port. Remove any protective dust caps and handle the connector by its plastic housing to avoid damage .
- Confirm the ONT's Power light is solid green, indicating it is receiving electricity and ready to transmit data .

Step 2: Connect the ONT to Your Router

- Use a Cat 6 or Cat 6a Ethernet cable to connect the ONT's LAN or Ethernet output port to the WAN/Internet port on your router .
- Make sure the cable is fully inserted and the ports are correctly matched. Loose connections can prevent internet access.
- Place both the ONT and router in a dry, well-ventilated area near a power outlet, ideally with surge protection .

Step 3: Power Cycle or Restart Devices

- Power off the router and ONT by unplugging them from the power source. Wait about 30 seconds .
