

Relay Protection Testing Instrument Device

Overview

A relay protection tester is a device used to test and verify the performance of relay protection devices in power systems. With Megger as your trusted partner, you can overcome the most complex of relay protection test challenges. Even our advanced relay test modules remain intuitive enough to. Ensure the reliability and safety of your protection system with Megger's specialised tools and accessories—ideal for testing auxiliary relays and handling complex or critical applications with precision and confidence. Testing protection systems doesn't stop at the relay. Its powerful six current sources (three-phase mode: up to 64 A / 860 VA per channel) with a great dynamic range, make the unit capable of testing even high-burden electromechanical relays with very. Three developments are currently causing a significant increase in the amount of assets requiring testing and this poses a serious challenge for many utilities: Rapidly growing demand for energy Current forecasts indicate that demand for electrical energy will continue to rise significantly in the.
