

Restart the power distribution box

Article Overview

Restarting a power distribution box involves sequentially turning on the main breakers, PDU switches, and UPS components while ensuring proper electrical connections and voltage supply.

Step-by-Step Restart Procedure

- Main Power Source
 - Ensure the main breaker feeding the PDU is set to ON. If the PDU has dual power sources, turn on the main breaker for each source ().
- PDU Input Switch
 - On the PDU itself, set the main input switch to ON to allow power flow into the unit ().
- PDU Breakers
 - Turn on the Q1 breaker (or equivalent) to apply power to the connected UPS or downstream systems ().
- UPS and Battery Modules
 - Push all battery modules into position if using a modular UPS system.
 - Set the DC disconnect breaker on the UPS to ON.
- Enable the system using the system enable switch. The startup screen should appear within 30 seconds ().
- Modular Battery Cabinets
 - If present, set the DC disconnect breaker on each cabinet to ON ().
