

Romanian Cable Trays for Long Spans

Article Overview

Romanian cable trays for long spans are available in metal, wire mesh, and ladder types, designed for industrial and civil installations with modular, high-strength, and CE-certified systems.

Types and Materials

Metal Cable Trays: Companies like RED Metal and Royal Expert Design (RED) manufacture galvanized steel trays with standard lengths of 3000 mm and widths from 50 to 600 mm, heights ranging 35–100 mm, with 60 mm being most common . These trays are perforated or embossed for ventilation and weight reduction, and all edges are flattened for safety . They are suitable for supporting power cables and small-diameter pipes over long spans without welding during installation .

Wire Mesh Trays: Wire mesh cable trays are highly durable, impact-resistant, and allow excellent ventilation, making them ideal for long spans where heat dissipation is critical . They are commonly used in construction, industrial, and mining applications and can be customized in size, shape, and configuration .

Ladder-Type Trays: Ladder trays provide maximum support for heavy cables over long spans. They are often used in industrial settings and can be combined with horizontal and vertical bends, tees, and reducers to create complex cable routes .

Features for Long Spans

- **Modular Design:** Components such as beams, bends, and branches can be connected with straps and fasteners, allowing flexible routing .
- **Load Capacity:** Galvanized steel trays with thicknesses up to 500 gr/m² can support heavy cable loads over extended spans .
