

Rubber strips in distribution boxes

Article Overview

EPDM rubber strips are commonly used for sealing distribution boxes, providing waterproofing, dustproofing, and vibration protection.

Types and Materials

EPDM Foam Rubber Strips are widely used for distribution boxes due to their excellent weather resistance, aging resistance, and chemical corrosion resistance. They are available in D-shaped, U-shaped, or square profiles, and can be self-adhesive for easy installation. These strips conform tightly to the edges of the box, creating a reliable seal that prevents moisture, dust, and debris from entering. Solid Rubber Strips are also used in custom power distribution boxes, offering high impact resistance, durability, and double insulation. These are often integrated into the box design for enhanced protection in industrial or event settings.

Key Features

- **Waterproof and Dustproof:** EPDM strips prevent water ingress and dust accumulation, protecting internal electrical components.
- **Temperature and UV Resistance:** EPDM and other high-quality rubber strips withstand extreme temperatures and UV exposure, ensuring long-term performance.
- **Vibration and Noise Reduction:** U-shaped or cushioned strips can reduce vibration and noise, which is particularly useful in mobile or outdoor installations.
- **Easy Installation:** Self-adhesive strips allow for quick DIY installation without additional tools. Cleaning the surface before application ensures a strong bond.

Applications
