

Should we lay cables first or install cable trays first

Article Overview

Cable trays should be installed first, fully secured and aligned, before laying and securing the cables inside them.

Installation Sequence and Rationale

1. Install Cable Trays First Cable trays serve as the structural support for electrical conductors. Installing them first ensures that:

- The trays are properly aligned, level, and securely mounted to walls, ceilings, or floors .
- Supports and brackets are spaced correctly to prevent sagging or mechanical stress .
- Clearance requirements and routing plans are verified before cables are introduced .
- Future maintenance and cable additions are easier because the tray system is fully established .

2. Prepare for Cable Installation Before placing cables, the tray should be inspected for:

- Correct type and size for the intended cable load .
- Absence of sharp edges or debris that could damage insulation .
- Compliance with fill limits (typically 40% for power cables, 50% for control cables) to prevent overheating .
