

Simple Primary Distribution Box

Overview

A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge. The Fuse Box is an older type of distribution panel that uses fuses instead of circuit breakers to protect electrical circuits. Each fuse is designed to blow when the current exceeds a certain limit, thereby cutting off the power to prevent damage. The. Primary distribution systems consist of feeders that deliver power from distribution substations to distribution transformers. Need a custom distribution box?

Request your quote. A power distribution box is a key part of any electrical system—it's the place where electricity from a main source gets divided and sent out to different circuits. What is an Electrical Distribution Box?
