

Single-mode dual-core indoor drop fiber optic cable

Article Overview

A single-mode dual-core indoor fiber optic cable is a duplex cable designed for long-distance, high-speed data transmission within buildings, featuring two parallel single-mode fibers in a single jacket.

Overview

Single-mode dual-core (duplex) fiber optic cables consist of two single-mode fibers, typically with a 9 μm core diameter and 125 μm cladding, enclosed in a single jacket for indoor use . Each fiber carries a single light mode, minimizing signal dispersion and allowing high-bandwidth transmission over long distances. These cables are ideal for enterprise networks, data centers, and telecom backbones where reliability and low attenuation are critical .

Key Features

- **Fiber Type:** Single-mode (OS1 for indoor short-range, OS2 for longer distances) supporting 1310 nm and 1550 nm wavelengths .
- **Construction:** Duplex or zipcord design with two fibers side-by-side, often with a mid-span separable web for easy termination .
- **Jacket and Rating:** Indoor plenum-rated (OFNP) or riser-rated (OFNR) jackets, often LSZH for low smoke and flame resistance .
- **Strength Members:** Aramid yarn or Kevlar reinforcement for tensile strength and durability during installation .
