

Soft-shell distribution box

Article Overview

A soft-shell distribution box is a plastic or thermoplastic electrical enclosure designed for safe, durable, and often waterproof distribution of electrical circuits.

Overview

Soft-shell distribution boxes, also known as plastic or thermoplastic distribution boards, are made from materials such as PC, ABS, PS, or flame-retardant plastics. These materials provide impact resistance, corrosion protection, and electrical insulation, making them suitable for both indoor and outdoor applications. They are commonly used in solar photovoltaic systems, outdoor lighting, agricultural irrigation, and marine environments.

Key Features

- **Protection Levels:** Soft-shell boxes typically offer IP40 to IP66/IP67 protection, providing dust-proof and waterproof performance depending on the model.
- **Durability:** Resistant to oxidation, UV exposure, and corrosion, ensuring long-term reliability in harsh conditions.
- **Customization:** Many manufacturers allow customization of color, material, opening positions, and wiring configurations, as well as flame retardancy and UV protection.
- **Installation:** Designed for surface mounting with DIN rails (e.g., TH35), they are space-saving and easy to assemble or disassemble.
- **Safety:** Provides protection for electrical components against short circuits, overloads, and environmental hazards.
