

Specifications and Models of Irish Home Electrical Distribution Boxes

Article Overview

Irish home electrical distribution boxes must comply with ESB Networks standards, using durable GRP/SMC materials, with dimensions 606mm (H) x 402mm (W) x 155mm (D), and include secure, weatherproof access.

Materials and Construction

Modern Irish meter boxes are typically constructed from Glass Reinforced Plastic (GRP) with a Sheet Moulding Compound (SMC) fire-retardant backboard, replacing older timber backboards for enhanced durability and fire safety . These materials are corrosion-resistant, UV-stable, and weatherproof, ensuring a minimum service life of 40+ years . The door and box comply with BS 8567:2012, and components like the key and locking mechanism are made from galvanised steel to ESB specifications .

Dimensions and Installation

The standard recessed meter box opening should be 606mm high, 402mm wide, and 155mm deep to comfortably house the cabinet . The box must be directly accessible from the main entrance driveway, typically on a wall facing the driveway or within 2 meters of a corner, and must not be obstructed by gates, porches, or security walls . Builders should install a hockey stick duct at the foundation stage to allow cable entry into the box .
