

Specifications for Single-Sided Adhesive Strips in Distribution Boxes

Article Overview

Single-sided adhesive strips for distribution boxes should combine strong adhesion, electrical insulation, mechanical stability, and compatibility with the enclosure materials.

Material and Adhesive Type

Single-sided adhesive strips are typically made from PVC, rubber, or other polymer films with one side coated in permanent or peelable adhesive. For electrical distribution boxes, PVC or rubberized strips are preferred due to their mechanical stability, flexibility, and insulating properties (). Adhesives can be acrylic-based for strong, long-term bonding or rubber-based for temporary or repositionable applications ().

Dimensions and Form Factor

- Width and thickness: Common widths range from 1/2 inch to 2 inches, with thicknesses from 1/16 inch to 1/8 inch depending on load and surface requirements ().
- Length: Strips can be supplied in rolls or pre-cut pieces to fit the distribution box layout.
- Custom shapes: Some suppliers offer discs or custom-cut strips for precise placement around terminals or components ().

Mechanical and Electrical Considerations
