

Switch fiber optic red light

Overview

When this light goes red, it means your ONT cannot detect the optical signal coming from the fiber cable. The LOS light should be OFF during normal operation. First, check if the fiber is connected. The LOS light on your router indicates the status of your internet connection to the Internet Service Provider (ISP). However, when it blinks red or stays solid red, it signifies a Loss of Signal, a problem preventing your router from communicating. When it comes to testing fiber optic cables, a Visual Fault Locator (VFL) is an essential tool in your toolkit. If your internet isn't working, the lights on your Fiber Jack can help you figure out what's going on. There are no specific requirements for this document. On most models — including the Langzhi L801, L880G, and L881G — you'll find the indicator lights on the front panel, usually with small icons or text labels underneath.
