

The cover of the distribution box

Overview

The outer enclosure is the physical shell of the distribution box and serves as the first line of protection. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. The. A distribution board (also known as a panelboard, circuit breaker panel or box, electric panel, fuse box or DB box) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit breaker for each circuit in. A distribution boxes is an essential device that manages the safe and efficient flow of electrical power throughout different areas of a building or facility. It helps control and distribute electricity to different areas.

Distribution board

OverviewNorth AmericaUnited KingdomManufacturer differencesLocation and designationTheatre lighting

North American distribution boards are generally housed in sheet metal enclosures, with the circuit breakers positioned in two columns operable from the front. Some panelboards are provided with a door covering the breaker switch handles, but all are constructed with a dead front; that is to say the front of the enclosure (whether it has a door or not) prevents the operator of the circuit breakers from contacting live electrical parts within. Busbars carry the current from incoming line (hot) conductors to the breakers
