

UK Active Optical Cable 1G

Article Overview

1G Active Optical Cables (AOCs) in the UK provide reliable 1 Gigabit per second connectivity for data centers, enterprise networks, and high-performance computing applications.

Overview

Active Optical Cables (AOCs) are fiber-based interconnects that integrate optical transceivers with a fiber optic cable, enabling high-speed data transmission with low error rates over longer distances than traditional copper DACs. For 1G applications, these cables are typically used in network switches, storage area networks (SANs), and server interconnects .

Key Features

- Data Rate: 1 Gigabit per second (1G)
- Cable Type: Singlemode or Multimode fiber, depending on distance and network requirements
- Connector Type: SFP or SFP+ modules compatible with Cisco, Netgear, Juniper, Arista, Dell, HP Aruba/Procurve, and H3C devices
- Distance: Typically up to 100 meters for standard 1G AOCs, with some multimode options supporting longer distances
- Applications: Rack interconnects, leaf-spine topologies, top-of-rack connections, and enterprise interconnects

Advantages Over Passive DACs
